LANGUAGES KNOWN:

1. English - Read, Write, Speak.
2. Tamil - Read, Write, Speak.
3. Hindi - Read, Write

ACADEMIC PROJECT:

GPRS Based Home Monitoring System Using Wireless Sensor Network

- The project focuses on efficient monitoring of home appliances. This system was introduced to replace Zigbee module to overcome major disadvantages in it.
- Since zigbee module can transmit information only up to 10 meters and has a low data transfer speed of about 250kbps so its performance is low.
- Zigbee is not secured system and costly. In order to overcome this issue General Packer Radio Services is used in which PIC controller and various sensors are used to detect the abnormalities around the surrounding environment.
- Those conditions are intimated to the users through a simple message. Hence this helps to monitor the home appliances even in the absence of mankind.
